Notes to the descriptive figures

Panel: 18 countries, 1990–2024, 630 country-years.

Exits from the top repression tercile while capital per worker was rising (Figure 5), by country: Brazil (2), Chile (1), Dominican Republic (2), Ecuador (2), Guatemala (1), Peru (2), Paraguay (1), El Salvador (2), Venezuela (1).

Two-way demeaned slope of redistribution on repression (Figure 4b): 1.399.

El Salvador uses the ILO labour income share (no PWT labsh). Capital per worker for 2020+ is a perpetual-inventory extension of PWT with WDI real investment growth; robot stocks are perpetual-inventory sums of Comtrade HS 847950 import values deflated by the US CPI.
